**Specialized Medical Device for Digitizing Analog Dental Films**

Medical film digitizing is an imaging procedure governed by medical and industry regulations. VIDAR’s Dental Film Digitizer is specifically tailored for dental applications and is the only digitizer that meets U.S. and European guidelines for dental applications. When making a diagnosis, image quality is everything; and the VIDAR Dental Film Digitizer is able to produce digitized images as detailed as the original film.

**VIDAR Dental Film Digitizer Features & Benefits**

- Supports scanning of all dental film sizes: Panoramic, Cephalometric, and Intraoral.

- Provides high quality images for primary diagnostic reading and fast scanning (18 seconds for a panoramic film).

- Images can replace film as the legal original.*

- Integrates analog film into digital workflow.

- Digitizes patient films from other referral facilities or for consultation.

- Increases insurance claims approval and payment.

*Assumes viewing & archiving system follows regulatory guidance for primary diagnostic applications.
